github.com/NickSar

Senior Software Engineer with **10+ years** designing event-driven systems and streaming data pipelines across Amsterdam, Berlin and Athens. Experienced in taking products from zero to production, introducing platform components adopted across teams, and leading system design. **Toptal Verified Expert** (Top 3% Talent).

EXPERIENCE

PandaDoc Athens, Greece Sep 2024 – Present

End-to-end agreement management platform: from creation to signature to payment.

Senior Software Engineer II Jun 2026 – Present

- Designed and led the implementation of PandaDoc's new **recipient portal**, from zero to production.

Senior Software Engineer Sep 2024 – Jun 2026

- Introduced **Debezium Change Data Capture (CDC)** to keep data in sync between microservices, and turned it into a reusable component adopted across teams.
- Improved Deal Room page rendering performance by **50%** by re-architecting inefficient legacy endpoints.
- Built Deal Room features, including analytics dashboards and task notifications.

HelloFresh Berlin, Germany Feb 2019 – Aug 2024

Global meal-kit leader, delivering over 1 billion meals in 2023.

Senior Backend Engineer Jan 2022 – Aug 2024

- Designed and led the extraction of communication preferences from the monolith into a new **Python/FastAPI** service, using Domain-Driven Design and Event Sourcing.
- Designed and led an in-house mobile event-tracking service (**Kotlin, Kafka**) that replaced Google Analytics and improved visibility into campaign performance.
- Integrated Twilio with Salesforce Marketing Cloud, enabling Marketing to launch SMS campaigns.
- Member of the hiring team, running system design and technical interviews; part of the on-call rotation.

Software Engineer Feb 2019 – Jan 2022

- Migrated modules from PHP monoliths to Go and Python microservices, reducing maintenance overhead.
- Built ETL pipelines with **PySpark, EMR, Airflow and Kafka** to deliver clean data products to the business.

iBOOD Backend Engineer · Amsterdam, Netherlands Oct 2017 – Dec 2018

- Extracted warehouse logic from the Odoo monolith into a Python/Flask microservice.
- Built features for logistics, finance and marketing in Python/Odoo.

CapCloud Backend Engineer · Utrecht, Netherlands Jan 2016 – Sep 2017

- Built the public client integration API and a component matching employee qualifications to job descriptions (Python/Django).

SKILLS

Core	Python, Kafka, Debezium, PySpark, Airflow, FastAPI, PostgreSQL, Kubernetes, AWS
Also	Go, Kotlin, Django, Terraform, Docker, GitHub Actions, Prometheus, Grafana
Practices	Microservices, Event Sourcing, Domain-Driven Design, Change Data Capture, ETL, CI/CD
Languages	Greek (native), English (proficient, ECPE), French (basic, DELF), German (basic)
Interests	Marathon running, basketball, literature

EDUCATION

MSc Computer Science 2013 – 2015
VU Amsterdam · High Performance Computing

Diploma, Electrical & Computer Eng. 2005 – 2012
National Technical University of Athens

PUBLICATION

IFL '17 Symposium Proceedings 2017
"Towards Compiling SAC for the Xeon Phi Knights Corner and Knights Landing Architectures: Strategies and Experiments"
